

Quipit App Design

Login page

- white brand text
- blue Facebook login button
- image in background with fade gradient
- slide in a picture every X seconds

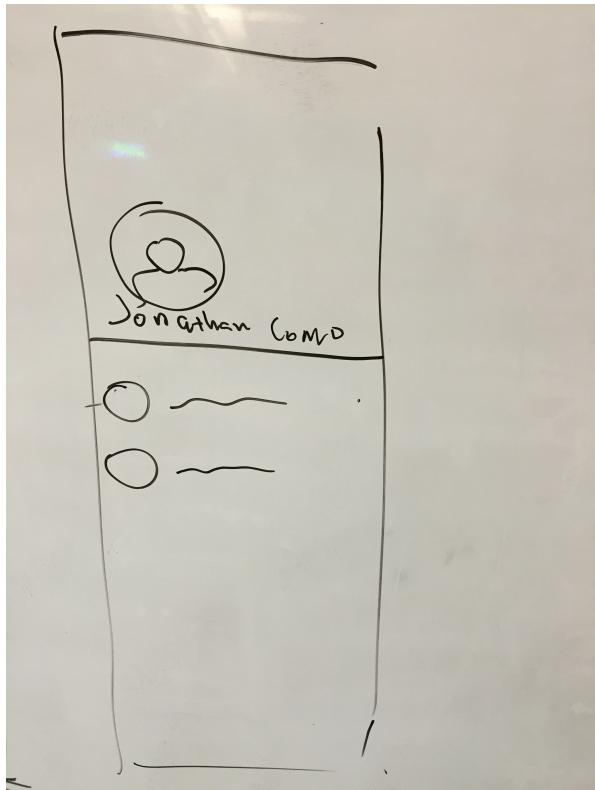

Action bar

- white background
- hamburger on the left
- title in the middle in orange font
- notification bell on the right
 - gray icon normally, lit orange with new notifications
 - badge will be white background, orange border with orange font

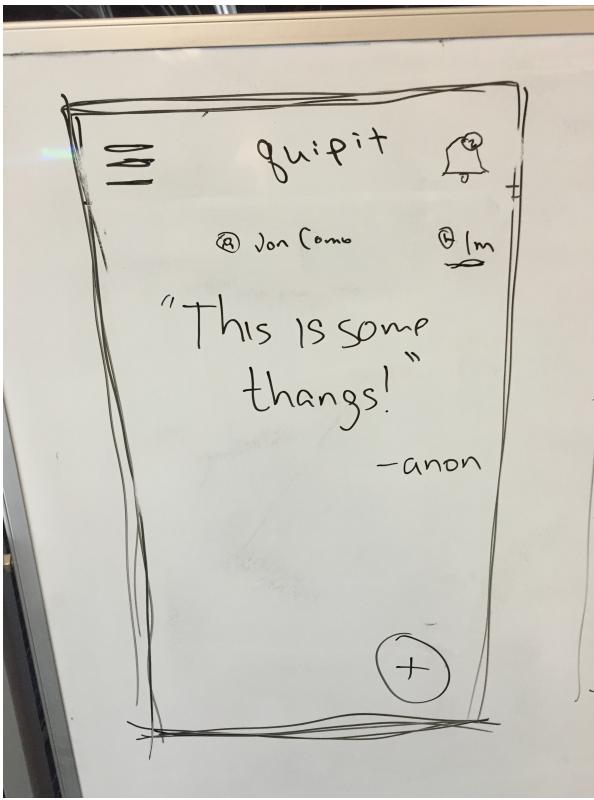

Drawer

- profile image with name under it
- background for header either user cover photo or a quipit branded image

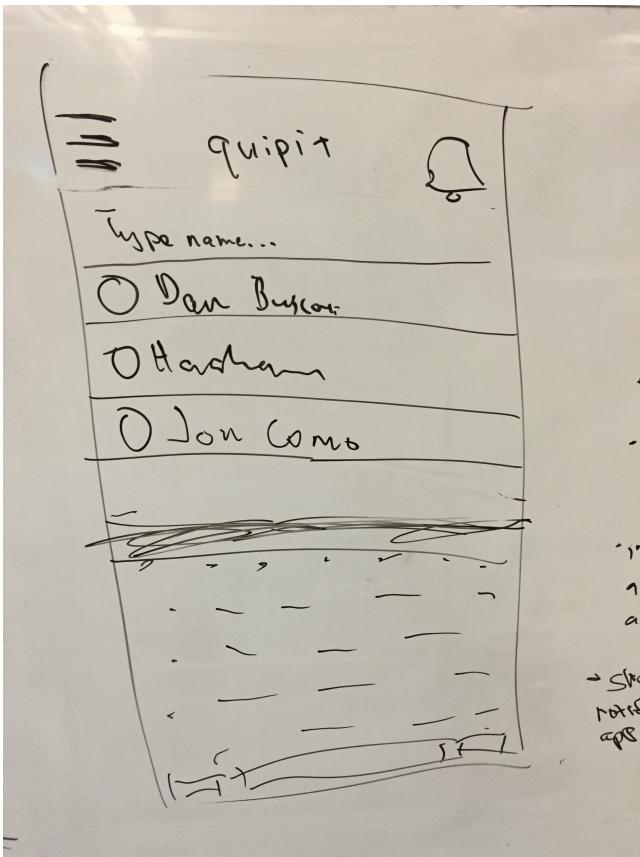

Quip feed

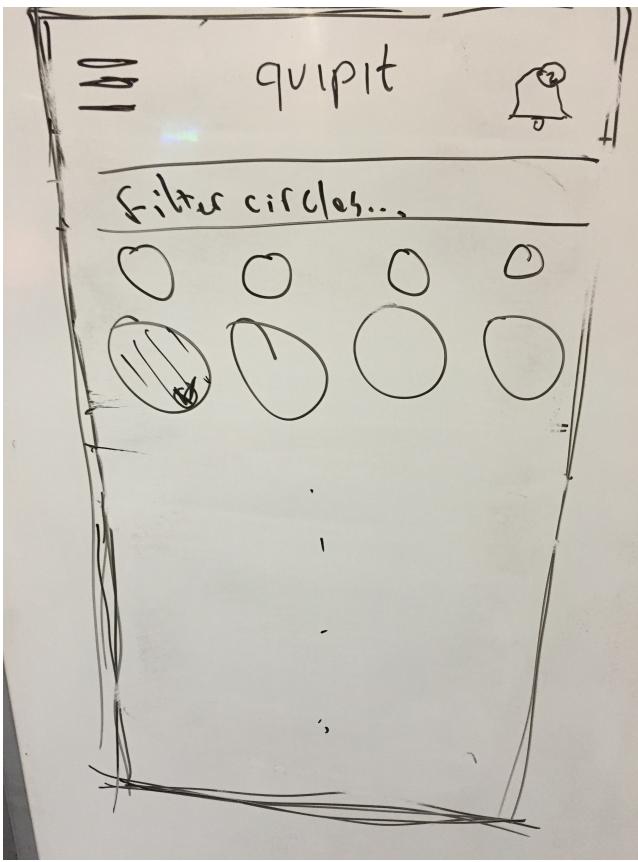

- author: small, with image, above text
- timestamp (not sure): either top right or bottom left
- text: large, centered, lots of focus
- source: bottom right, no image
- long click on text will bring up a share dialog

Quip creation

- The creation form will look like the real quip but with editable fields
- To select a source, click the source field and an input fragment will slide up (see picture)
- When a user has been selected (or a name has been entered) the fragment will close by sliding down
- When selecting circle, all circles will be displayed with their images in a grid view and they can be filtered down
 - When circle is selected, image will dim and green checkmark will appear in bottom right
- Input fields should be debounced so that the filtered view only changes after a short period of inactivity

Maybes

- Search circles within the sidebar
- Sort circles by recent activity in the sidebar
- Circles with recent activity should have their names in orange
- Many-many relationships between circles and quips
 - In quip feed, list all circles (that the user belongs to) for each quip
- Slide down notification in app (similar to Facebook)
